Chair Steny H. Hoyer

How the ARP and IRA's Enhanced ACA Subsidies Benefit California's 24th District

Executive Summary

In 2010, President Obama signed the Affordable Care Act (ACA), which has enabled tens of millions of Americans to access affordable, high-quality health insurance. Working with the Biden-Harris Administration, Democrats in Congress helped enact the American Rescue Plan (ARP) and the Inflation Reduction Act (IRA), which created and extended enhanced financial assistance to purchase health insurance coverage on the marketplaces originally established by the ACA. With the assistance provided by the ARP and the IRA, nearly 6 million new people enrolled in marketplace coverage during 2021 and 2022, and 80% of federal marketplace enrollees had access to a plan for \$120 or less per year. Nationally, the number of uninsured Americans reached an all-time low of 8% in 2022, and the total number receiving health insurance through an ACA marketplace reached a record high of 16.4 million in 2023.

The enhanced subsidies are providing significant benefits in **California's 24th District**. In 2023, an estimated **41,000 people** in the district enrolled in ACA marketplace health insurance coverage. As a result of the IRA, the average enrollee will save **\$1150** in premiums this year.

Individuals with ACA marketplace health insurance coverage in the district will pay on average **\$2,040** in premiums this year. Without the enhanced subsidies provided through the IRA, the average premium would have increased to **\$3,190**, an increase of **56%**.

The savings for families in the district purchasing a benchmark silver plan will be significantly larger in many instances. For example:

- A 60-year-old couple with a household income of \$80,000 will save **\$25,786** in premiums this year, avoiding a **457%** increase in premiums.
- A family with a 35-year-old single parent with one child, and a household income of \$30,000 will save **\$1,272** in premiums this year, avoiding a **757%** increase in premiums.
- A family with two 40-year-old adults, two children, and a household income of \$75,000 will save **\$3,096** in premiums this year, avoiding an **457%** increase in premiums.

Background

The ACA enabled tens of millions of Americans to access health insurance coverage by providing new federal funding for states to expand their Medicaid programs and establishing new online marketplaces for consumers to compare and purchase insurance with the support of tax credits.

The ARP and IRA have improved the ACA by making health care even more affordable for Americans. During 2021 and 2022, the ARP reduced the cost of premiums and expanded eligibility for financial assistance to purchase coverage through the federal marketplace ([HealthCare.gov](https://www.healthcare.gov)) and state-run marketplaces. The law:

- Lowered the maximum out-of-pocket premium for marketplace plans for people with a household income between 100% to 400% of the federal poverty level (FPL).
- Reduced the maximum out-of-pocket premium to zero for people with incomes between 100% and 150% of the FPL.
- Expanded eligibility for premium tax credits to households with incomes above 400% of the FPL if their health insurance premiums exceed 8.5% of their household income.²

The ARP ensured that no one has to pay more than 8.5% of their household income to purchase ACA marketplace health insurance coverage, and most households pay significantly less. In 2021 and 2022, 80% of federal marketplace enrollees could find a plan for \$120 or less per year.³ As a result of these savings, approximately 6 million new people signed up for marketplace coverage in 2021 and 2022.⁴ The IRA continued these savings through 2025 and prevented millions of marketplace enrollees from facing steep increases in their premium payments.⁵

Across the country, the average household enrolled in an ACA marketplace plan and receiving financial assistance is now saving over \$800 per year due to the ARP and IRA's enhanced ACA subsidies. The average household's marketplace premium, after subsidies, has fallen by 21%, and because of all these opportunities to access affordable options and increased savings, total marketplace enrollment hit an all-time high in 2023 with 16.4 million enrolled.⁶

In 2013 – the year before initial ACA marketplace coverage became available – the national uninsured rate was 16.6%.⁷ By 2020, the uninsured rate had fallen to 10.3%.⁸ Since 2020, an additional 5.2 million people who were previously uninsured have gained health coverage, resulting in a new record-low national uninsured rate of 8% as of 2022.⁹

The Benefits of Enhanced Subsidies in California's 24th District

In 2023, an estimated **41,000 people** enrolled in marketplace health insurance coverage through the ACA in **California's 24th District**. As a result of the IRA, the average enrollee in the district will save **\$1150** in premiums this year.

On average, individuals with marketplace coverage in the district will pay **\$2,040** in premiums this year. If Congress had not extended the enhanced subsidies in the IRA, the average premium for these individuals would have been **\$3,190**, which is an increase of **56%**.

Individual families in the district can realize significantly larger savings. For example, here are the savings three representative families purchasing a benchmark silver plan would realize:

- A 60-year-old couple with a household income of \$80,000 could obtain coverage this year for **\$5,640**. Without the IRA's extension of the ARP's enhanced subsidies, the couple would have had to pay **\$31,426** in premiums, which would be a **457%** increase in premiums. In dollar terms, this couple is projected to save **\$25,786** in premiums for health insurance coverage.¹⁰
- A family with a 35-year-old single parent with one child and a household income of \$30,000 could obtain coverage this year for **\$168**. Without the IRA's extension of the ARP's enhanced subsidies, the family would have had to pay **\$1,440** in premiums, which would be an increase of **757%**. In dollar terms, this family is projected to save **\$1,272** in premiums for health insurance coverage.
- A family with two 40-year-old adults, two children, and a household income of \$75,000 could obtain coverage this year for **\$3,612**. Without the IRA's extension of the ARP's enhanced subsidies, the family would have had to pay **\$6,708** in premiums, which would be an increase of **86%**. In dollar terms, this family is projected to save **\$3,096** in premiums for health insurance coverage.

Conclusion

Thirteen years ago, President Obama signed the ACA into law knowing the simple truth that the prosperity of our nation depends on the health of all its people. Enhanced subsidies have proven to be a key tool in providing access to affordable health insurance coverage to the American people. Millions more marketplace enrollees are now able to access affordable health insurance plans, causing marketplace enrollment to reach an all-time high and the uninsured rate to fall to a record low. In communities across the country, these expanded ACA subsidies are making health care coverage affordable for millions of families.
